

Unified Resilience

New waves of disruption are threatening. Each different, rarely anticipated, and not captured in traditional change. Geopolitical tension, cyber incidents, climate extremes, regulatory shifts, and brittle supplier networks collide in ways older playbooks were never built for. Every organization runs on a web of dependencies, people, technology, suppliers, and infrastructure, any of which can trigger a cascade. **Disruptions are now a new normal, not a temporary deviation.**

A single failure can interrupt revenue, erode trust, invite scrutiny, and damage a reputation built over years. Leaders without tested plans face rushed decisions under pressure, the worst conditions for choices that shape recovery.

Unified Resilience brings together two powerful levers: a **Response Lever** that enables rapid action through Emergency Response and Crisis Management, and a **Transformative Lever** that embeds Resilience by Design to help the organization anticipate, withstand, and evolve through future disruption. At Uniquus, we integrate Response and Transformative Levers into a single resilience ecosystem—shifting resilience beyond static contingency plans into a dynamic, enterprise-wide capability that evolves with disruption.

Our Unified Resilience Portfolio

Resilience

Climate Resilience

Our Unified Resilience Framework

Building resilience now requires organizations to anticipate rapid change and prepare for the unpredictable.

As disruption becomes more dynamic and interconnected, organizations need an Unified (instead of Integrated) approach to resilience. The framework below illustrates the core capabilities required to protect critical functions, strengthen enterprise resilience, and create long-term value.

This unified approach to resilience does more than prepare an organization for disruption. It shapes how quickly it recovers, how confidently it meets regulatory obligations, and how firmly it protects the reputation built over years.

Our Unified Resilience Portfolio

Our portfolio spans the full spectrum, from immediate crisis response to long-term operational, financial, and climate resilience, enabling organizations to embed resilience into their DNA, and address every dimension of vulnerability through a single, integrated programme.

01

Emergency Response

Immediate tactical response to declared incidents. Focuses on loss minimization, life safety, limiting containment and protection of assets and environment.

02

Crisis Management

Large-scale disruptions. Focuses on protecting reputation, stakeholder trust and stabilizing situation.

03

Operational Resilience

Ensures critical services and essential functions remain operational through disruption. Focuses on minimum service levels and recovery activities to protect operational continuity.

04

Supply Chain Resilience

Proactive identification and management of supply chain risks. Embeds resilience requirements and continuity standards throughout the supplier ecosystem to prevent and respond to disruptions.

05

Financial Resilience

Ensures the organization can absorb financial shocks while continuing to meet obligations to customers, regulators and capital providers. Focuses on liquidity, ability to raise capital and recovery under stress.

06

Digital and Cyber Resilience

Ensures protection and rapid restoration of IT systems and cyber infrastructure, underpinning recovery of critical services and essential functions.

07

Climate Resilience

Anticipates the physical and transition risks of climate change and embeds them into strategy, operations and disclosure to protect long-term value.

Our Unified Resilience Services

Each capability within the portfolio is designed to work together. Response Levers enable coordinated, decisive action during a disruption, while Transformative Levers build long-term capabilities that strengthen resilience and protect essential services and critical functions against future disruptions.

RESPONSE LEVERS

Emergency and Crisis Management

Coordinates leadership, governance, and tactical response during disruptions, from site-level emergencies affecting people and assets to enterprise-wide crises that threaten reputation, stakeholder trust, and the license to operate. It brings together command structures, communications, and rehearsed playbooks to enable informed, timely decision-making under pressure.

TRANSFORMATIVE LEVERS

Operational Resilience

A holistic framework aligned with ISO 22301 that enables organizations to anticipate disruption, protect critical operations, and recover while safeguarding stakeholders, reputation, and long-term value.

Supply Chain Resilience

Proactive identification and management of supply chain risks, embedding resilience requirements and continuity standards throughout the supplier ecosystem, including the contractual obligations that make those standards enforceable.

Supply Chain Risk and Concentration Assessment

Visibility into where your supply chain is most exposed by tier, geography and concentration.

Third-Party Resilience

Confidence that critical suppliers can recover and meet your continuity standards consistently.

Supply Chain Continuity Planning

Tested playbooks and alternate sourcing options that keep goods and services flowing through disruption.

Contractual Clause Review and SLA Alignment

Vendor contracts and SLAs that translate your recovery objectives into enforceable supplier obligations.

Financial Resilience

Ensures the organization can absorb financial shocks while continuing to meet obligations to customers, regulators and capital providers. Focuses on liquidity, capital and recovery under stress.

Liquidity and Capital Stress Testing

Assurance that your liquidity, capital and funding profile can absorb potential shocks.

Recovery and Resolution Planning

Credible recovery options and resolution arrangements that satisfy regulators and protect the franchise.

Financial Scenario Modeling

Forward-looking scenarios that show how disruption translates into financial outcomes and where to act first.

Digital and Cyber Resilience

Digital and Cyber Resilience ensures the rapid restoration of technology systems, data, and infrastructure following a disruptive event. Aligned with ISO 27031, it connects Recovery Time Objective (RTO) and Recovery Point Objective (RPO) targets to BCM recovery objectives, ensuring technology recovery supports broader business continuity priorities.

Digital and Cyber Recovery Governance and Reporting

Structured governance and reporting that gives leadership confidence in organization's IT infrastructure and system readiness to deter potential cyber threat.

Recovery Architecture Design

Technology architecture choices, from system redundancy to cloud-based Disaster Recovery (DR), matched to ensure continuity of your critical services and essential functions

Cyber Recovery Planning

Specific, rehearsed playbooks for ransomware, breach and other cyber-driven outages.

DR Testing and Validation

Confidence with evidence, that your IT recovery capabilities work when called upon.

Climate Resilience

Anticipates the physical and transition risks of climate change and embeds them into strategy, operations and disclosure to protect long-term value.

Climate Risk and Vulnerability Assessment

Clarity on how physical and transition climate risks could affect your assets, operations and long-term value.

Climate Adaptation Strategy

A board-ready roadmap that keeps critical operations and stakeholder commitments intact as climate conditions shift.

Any resilience programme is only as strong as its ability to function under pressure. Static plans, siloed spreadsheets, and manual reporting cannot keep pace with modern disruption. When every second counts, manual interventions slow response times.

Embedding technology across the response and transformative levers transforms resilience capabilities from a compliance posture into a live operational capability that connects plans, people, and processes, automates critical workflows, and gives decision makers the intelligence they need when it matters most.

Risk UniVerse is our cutting-edge Governance, Risk and Compliance (GRC) platform designed to streamline an organization's resilience requirements through centralized data, automated workflows, and interactive dashboards — delivering enhanced visibility and audit readiness across the enterprise.

Our platform brings together crisis, emergency, and resilience management through incident intake, command workflows, dependency and Single Point of Dependency (SPoD) mapping, recovery planning, and unified reporting. AI-enabled alerts, scenario analysis, and decision-ready insights help management respond quickly during disruptions while safeguarding the continuity of critical services and essential functions.

Why Uniquus

1 Deep Domain Expertise

Our experts have led and contributed to over 100 enterprise resilience implementations globally. This wealth of experience ensures your program is informed by best practices and real-world insights.

2 Customized Solutions

We understand that no two organizations are the same. Our solutions are tailored to align with your unique strategic goals, industry dynamics and risk appetite.

3 Technology Enabled

Our experts continuously enhance existing tools and develop new solutions, supporting GRC and BCM tool implementation to automate plan management and resilience reporting.

4 End-to-End Partnership

Our team supports you at every stage, from initial assessments to ongoing monitoring and continuous improvement, supporting continuous improvement and long-term program performance.

5 Global Talent, Local Delivery

A deep global talent pool that works as a true extension of your management, delivering integrated support across key markets: USA, India and the Middle East.

6 Partner-Led Delivery

Our team embodies agility and responsiveness. High partner and director involvement on every engagement ensures quality, accountability, and strategic alignment.

CHANGE THE WAY CONSULTING IS DONE
